

16 October 2020

Dear Respondent,

I, Rual Jacobs, would like to ask for your assistance to partake in the following research for school purpose. I am undertaking a research project on:

“Factors Motivating Team Performance to Mitigate Construction Project Failure at a Selected Site in George” – [Municipal Environment in Engineering] – *I am trying to bring this closer to home seeing that majority of the Consultants and Contractors is doing work for the Municipality.*

The research focuses on evaluating how best to motivate construction employees in organisations to an increased productivity to ultimately achieve project goals. The information provided will be used as a guide to assess and make recommendations on how to improve project performance and also how best to motivate employees. We kindly request that you complete the following questionnaires as it will take no longer that 30 minutes of your time. With regards to any queries, please do not hesitate to contact me directly.

Your participation is highly appreciated, and thank you. Please email your completed questionnaire to wallysaaiman@gmail.com or rpiacobs@george.gov.za

Regards,

Email: wallysaaiman@gmail.com

Tel: (+27) 60 673 5838

*Note: Engineers, Project Managers, Project Engineers, Site Agents, Health and Safety professionals, others etc. anyone that engage with projects on a daily basis are encouraged to participate. I know majority of the questions are related to the construction profession, but I am asking that you please help in treating questions as per your relevant industry. Motivation or the lack thereof materialises across all boundaries regardless of the industry.
